We develop solutions!

RUG SEMIN is Europe's leading producer and supplier of access panels.

Our products enjoy the highest degree of recognition worldwide for their outstanding quality and reliability.

Our primary objective as a progressive, future-oriented company is to provide our customers with high-quality, innovative and safe products to enable them to achieve long-term market success.

Each and every employee at RUG SEMIN attaches the utmost importance to customer satisfaction and a lasting partnership. We view the continuous development of our employees and the provision of an employee-friendly and modern working environment as the basis for long-term business success and sustainable corporate development.

The continuous further development of our products, state-of-the-art manufacturing processes at the highest quality level and competent support from our technical advisors – that's what we understand by

“Quality and safety” ... made by RUG SEMIN

We embrace the challenge of responding to new developments and changing market requirements ever more quickly and in shorter periods of time in all of our product areas.

We develop solutions that offer planners and installers the very highest level of safety based on state-of-the-art technology.

Our competent and experienced employees would be delighted to provide detailed personal advice on the RUG SEMIN product range. Simply contact us!

Subject to technical changes.

Dimensions

Dimensional data:

Size

A x B (V): All access panels and access doors

A (V) x B: All Alumatic partition panels

(V): Hinge side

Installation dimension

A1 x B1

We recommend to increase the dimension of the construction opening according to the data sheet or assembly instructions.

Outer dimension

A2 x B2

Outer frame dimension

Clear width

A3 x B3

Please note that the inner dimension of the frame may be smaller due to construction-related elements such as catch arms and fasteners etc. (clear opening).

Heights

T1: (Depth 1) e.g. frame height or depth

T2: (Depth 2) e.g. total height with panel

T3: Visible frame width

Access panel AluNova

Installation wall (example)

Illustration without panel lid

Mounting instruction:

For wall mounting, the locks must be positioned on top of the panel

AluLight Deco access panel

filler free

with special gypsum plasterboard inlay for producing high-quality surfaces, concealed snap locks and self-adjusting safety catch arms, for ceiling and wall installation

- Production of high-quality surfaces with minimal effort
- Screw head free gypsum plasterboard inlay
- High resistance of the surface against mould and yellowing

- Double-sided catch mechanism for all sizes offers maximum safety
- Inlay in panel lid can be wiped clean with a damp cloth

BENEFITS

The AluLight Deco access panel is meant for installation in walls and ceilings in dry construction for the production of high-quality surfaces. The surface of the special gypsum plasterboard inlay is smooth, white and non-porous and is fastened without screws in the surface. With a minimum of filling work, high-quality surfaces, e.g. in quality grade Q3, can be produced. The panel lid is secured on both sides by self-adjusting catch arms. The catch arms guarantee that the panel lid is caught every time it is opened.

Built-in gypsum plasterboard Typ H2 / 12.5 mm, removable panel lid, suitable for wet rooms.

Mounting frame and panel lid made of aluminium.

Assembly instruction: For wall installation, the locks must be positioned upwards.

12.5 mm gypsum plasterboard inlay CE certified according to DIN EN 520: Typ H2

AluNova without inlay access panel

for on-site installation of 10 mm gypsum plasterboard inlays

with circumferential rubber lip seal, concealed snap locks and self-adjusting safety catch arms, for ceiling and wall installation

BENEFITS

Mounting frame and door profile frame made of torsion-resistant extruded aluminium profile in anodised quality.
Detachable panel lid.

Assembly instruction:

For wall installation, the locks must be positioned upwards.

AluNova without inlay, with rubber lip seal - for on-site installation of 10 mm gypsum plasterboard inlays

AluPlana® access panel

filler-free, air- and dust-tight

with circumferential rubber lip seal and gypsum plasterboard inlay, suitable for wet rooms, with concealed snap locks and self-adjusting safety catch arms, for ceiling and wall installation

- High quality rubber lip seal
- Self-adjusting safety catch arms on all sizes offer maximum safety
- Screw head free gypsum plasterboard inlay
- Gypsum plasterboard inlay flush with the frame of the panel lid

BENEFITS

Normalized sound level difference tested according to EN ISO 10140-2: 47 dB (1 x 12.5 mm, dimension 400 x 400 mm) and 49 dB (2 x 12.5 mm, dimension 400 x 400 mm). Tested for air permeability according to DIN EN 1026 and DIN EN 12207.

Built-in gypsum plasterboard H2, 12.5 mm or 2 x 12.5 mm, removable panel lid.
Mounting frame and door profile frame made of torsion-resistant extruded aluminium profile in anodised quality.

Test reports available upon request.
Assembly instruction: For wall installation, the locks must be positioned upwards.

University Hospital

Paul Stradins Riga

Paul Stradins University Hospital in Riga is the largest hospital in Latvia.

The building, which was built in 1910, is currently undergoing extensive expansion.

The first construction phase began in 2017. The expansion is scheduled to be completed by 2023.

Up to now, 2800 access doors from RUG SEMIN have been installed there. This includes the models **Alumatic**, **AluNova** as well as fire protection panels **AluRapid**.

Address:
Pilsonu iela 13, Zemgales priekšpilsēta,
Rīga, LV-1002, Latvia

AluPlana Deco access panel

filler-free, for the production of high-quality surfaces

with circumferential rubber lip seal and gypsum plasterboard inlay, suitable for wet rooms, with concealed snap locks and self-adjusting safety catch arms, for ceiling and wall installation

- Production of high-quality surfaces with minimal effort
- Inlay in panel lid can be wiped clean with a damp cloth
- High resistance of the surface against mould and yellowing
- Panel with silicone seal, dust-tight, no contamination in the joint area

- Screw head free gypsum plasterboard inlay
- Double-sided catch mechanism for all sizes offers maximum safety

The AluPlana Deco access panel is designed for installation in walls and ceilings in dry construction for the production of high-quality surfaces. The surface of the special gypsum plasterboard inlay is smooth, white, non-porous and without screw heads. High-quality surfaces, e.g. in quality level Q3, can be produced with a minimum of filling work. The panel lid is secured on both sides by self-adjusting catch arms. The catch arms guarantee that the panel lid is caught every time it is opened.

Mounting frame and panel lid made of aluminium.
For wall installation, the locks must be positioned upwards.

12.5 mm gypsum plasterboard inlay H2 according to DIN EN 520

AluPlana Iso access panel

filler-free, air and dust tight, with additional insulation

with circumferential rubber lip seal and gypsum plasterboard inlay, suitable for wet rooms, with concealed snap locks and self-adjusting safety catch arms, for ceiling and wall installation

- Screw head free gypsum plasterboard inlay
- Gypsum plasterboard inlay flush with the frame of the panel lid

- High-quality rubber lip seal prevents contamination by air currents in the joint area
- Double-sided catch mechanism for all sizes offers maximum safety
- Gypsum plasterboard inlay on the back with insulating material

Built-in gypsum plasterboard H2, 12.5 mm, removable panel lid.
Mounting frame and panel lid made of aluminium.

Tested for air permeability according to EN 1026 and EN 12207.
Test results in the best classification level (window class 4).

Tested for airborne sound insulation in accordance with DIN EN ISO 10140-2.
The measured sound insulation value is 31.4 dB.

L. Goldschmidt-School

IGS MÜHLENBERG - Hanover

The Leonore-Goldschmidt School in Hanover / Mühlenberg is an all-day school for grades 5-13.

In this project, mainly access panels were installed in special sizes, adapted to specific requirements.

For example, **2-leaf access panels** were installed in the classrooms, which ensure comfortable and quick access to the air conditioning units in the ceiling area.

Executing company: Interakustik GmbH - Isenbüttel

Alumatic access panel

with circumferential rubber lip seal and gypsum plasterboard inlay, suitable for wet rooms, with concealed snap locks and self-adjusting safety catch arms, for ceiling and wall installation

- Extremely torsion-resistant aluminium profiles also enable the use of oversizes; multi-leaf panels and bespoke sizes
- Self-adjusting safety catch arms on all sizes offer maximum safety

- Screwed gypsum plasterboard inlay enables replacement on site

Normalized sound level difference tested according to EN ISO 10140-2:

46 dB (1 x 12.5 mm, dimension 400 x 400 mm), 46 dB (1 x 15 mm, dimension 400 x 400 mm),
44 dB (2 x 12.5 mm, dimension 400 x 400 mm).

Built-in gypsum plasterboard H2, 12.5 mm; 15 mm or 2 x 12.5 mm, removable panel lid, with mounting kit, suitable for wet rooms. Assembly instruction: For wall installation, the locks must be positioned upwards. Multiwing solutions and lock options, look at page 62, 63.

Custom-made products

Suitable for inlays: Cement board, Heradesign, fibreboard of all kinds. Panelling thicknesses up to 50 mm are possible.

Alumatic access panel for acoustic ceiling

for perforated gypsum plasterboard inlay

with concealed snap locks and self-adjusting safety catch arms, for ceiling and wall installation

- Made to measure according to hole design
- Continuous hole pattern is retained
- Prepared for on-site perforated plate mounting
- Also suitable for other inlays, e.g. veneer sheets or similar
- Special sizes for ceiling installation two- or multi-leaf (bridge-free) are possible
- Self-adjusting safety catch arms on all sizes offer maximum safety

BENEFITS

Mounting frame and panel lid frame made of torsion-resistant anodised quality extruded aluminium profile.

The access panel is manufactured in the desired dimensions according to order. When ordering, it is essential to state which dimension is to be assigned to the panel side.

The offered nominal dimension (mounting frame outer dimension) is manufactured in accordance with the perforated plate design used, accurate to the mm for central installation in the grid. The panel cover frame inner dimension is 10 mm smaller. The perforated panels must be installed by the customer in accordance with the grid.

Special sizes for ceiling installation, double or multiple leaf (bridge-free) are possible.

The installation of the access panel in this size requires, for instance,

- the correct manufacture of the recess
- the necessary replacements according to the guidelines of the suspended ceiling manufacturer
- rigid suspension with vernier suspension
- the instruction of the user on how to open and close the entire construction

Required information:

- Perforated plate design or hole pattern
- Desired construction opening size

Assembly instruction: For wall installation, the locks must be positioned upwards.

Custom-made products
on request

Alumatic Light 25 without inlay access panel

prepared for 25mm inserts; gypsum board or wood wool slabs

with concealed snap latches and self-adjusting safety stay arms

- material available on site can be used as an insert
- particularly suitable for wood wool slabs

Our Alumatic Light 25 access panel is especially suitable for installation in suspended ceiling constructions without fire exposure, where permanent access to the ceiling cavity is required (e.g. for maintenance work).

The Alumatic Light 25 is delivered without inlay. The hatch cover is secured on both sides by self-adjusting safety stay arms. The safety stay arms ensure the hatch cover is held each time the hatch is opened. The concealed snap latches open and close the access panel when pressed.

Not suitable for indoor swimming pools, outdoor applications and ball impact resistant constructions.

Custom-made products:

- Available up to an installation depth of 50 mm.
- Also available as a double leaf inspection hatch
- Different lock options additionally available separately (cylinder lock, square socket lock, insert for euro cylinder)
- Suitable for board weights of max. 25 kg/m²

Custom-made products and dimensions

on request (10 mm grid)

NOTES

Westend Duo

Frankfurt am Main

The Westend Duo with its striking twin towers is a highlight on the Frankfurt skyline. Innovative construction technology makes these 96 m high towers low-energy buildings.

Completely new ceiling constructions allow the column-free design of all rooms (except for the corner pillars) and accommodate the supply areas for IT / communication, lighting supply and ventilation.

Our air-tight access panels ensure easy and yet safe access.

Architect: KSP Engel & Zimmermann, Frankfurt a. M.
Executing company: Jaeger Expansion, Frankfurt a. M.

CeraMatic access panel

tileable

with circumferential rubber lip seal and gypsum plasterboard inlay, suitable for wet rooms, with concealed snap locks and safety cable, for wall installation

- Simple and safe handling
- Uniform joint pattern

- Spacer profile in the frame to protect the tile edge
- Standard sizes available on stock

CUSTOM-MADE PRODUCTS:

Panel cover sizes according to tile dimensions. Assembly instruction: For wall installation, the locks must be positioned upwards.

Ordering information:

For custom-made products, please state the exact tile and planned joint dimensions when placing your order.

Example:

Tile size 100 x 100 mm, panel lid 4 tiles wide, 3 tiles high, joint width 3 mm

$$\begin{array}{rcl} 4 \times 100 \text{ mm tile width} & = & 400 \text{ mm} \\ + 3 \times 3 \text{ mm joint width} & = & 9 \text{ mm} \\ \hline \text{Panel cover width} & = & 409 \text{ mm} \end{array}$$

$$\begin{array}{rcl} 3 \times 100 \text{ mm tile height} & = & 300 \text{ mm} \\ + 2 \times 3 \text{ mm joint width} & = & 6 \text{ mm} \\ \hline \text{Panel cover height} & = & 306 \text{ mm} \end{array}$$

*Number of joints = number of tiles -1

AluQuattro® access panel

driving rain, smoke, air and dust tight

with circumferential EPDM hollow chamber seal and gypsum plasterboard inlay, suitable for wet rooms, with concealed snap locks and safety catch arms, for ceiling and wall installation

- Ideal for rooms where the supply or exhaust air is routed through the ceiling cavity
- Tight up to 600 Pa air pressure (= wind speed of approx. 100 km/h)
- Particularly suitable for wet rooms and clean or operating rooms where special air management (positive/negative pressure) is required

- Especially high tightness due to hollow chamber seal
- Prevents the escape of cold smoke and thus protects against the risk of poisoning
- Also available with cement-bound plasterboard inlays as a special design

Tested for driving rain tightness in accordance with EN 1027 and EN 12208. Tested for smoke tightness according to DIN EN 1634-3. Tested for air permeability according to DIN EN 1026 and DIN EN 12207. Test results in the best classification level (window class 4).

Tested for airborne sound insulation in accordance with DIN EN ISO 10140-3.

The measured sound reduction index is 34.8 dB (2 x 12.5 mm) and 30.5 dB (1 x 12.5 mm).

Built-in gypsum plasterboard H2/GKBI 12.5 mm or 2 x 12.5 mm, removable panel lid, with mounting kit, suitable for wet rooms. Mounting frame and panel lid made of torsion-resistant anodised quality extruded aluminium profile.

Test documents for air tightness or sound insulation values available upon request.

Assembly instruction: For wall installation, the locks must be positioned upwards.

Insertion door access door

filler free

with concealed snap locks, gypsum plasterboard inlay suitable for wet rooms, for drywall and solid walls

- Versatile use for all panelling thicknesses and wall thicknesses
- Retrofittable (inserted from room side)

- Easy installation
- Especially stable steel frame

BENEFITS

The RUG SEMIN insertion door is characterised by its particularly stable construction. Our innovative hinge technology allows the door leaf to be unhinged for mounting the frame. This makes installation of the insertion door particularly easy.

The door can no longer be unhinged once the frame has been installed and filled! It is positioned and fixed flush with the wall surface.

The frame is a robust welded construction made of galvanised steel. Door leaf with gypsum plasterboard inlay H2, 12.5 mm, detachable for installation.

Isoferma® access door

air- and dust-proof, insulated

with circumferential EPDM hollow chamber seal, with concealed snap locks, for ceiling installation

- Homogeneous appearance of the door leaf due to concealed push locks
- Tool-free operation and simple installation
- Supplied with insulating material
- Detachable door leaf

- Durable powder-coated surface
- Airtightness according to Blower Door Test
- Optional: Insulating frame prevents the existing insulation material from falling out

Tested for airborne sound insulation in accordance with DIN EN ISO 10140-2. The measured sound insulation value is 42 dB.
Door leaf with concealed push locks, after installation the closing direction cannot be changed.

Galvanised sheet steel, coated white (RAL 9016).

This access door type V2, thermally insulated and airtight, fully complies with standard NF-EN 13829 for installation in residential buildings in accordance with BBC RT 2012.

Test reports can be made available upon request.

Softline access door

white coated with cylinder lock
for ceiling and wall installation

- Lockable with cylinder lock
- Easy installation
- Detachable door leaf

- Durable powder-coated surface
- With wall anchor as standard for secure mounting
- Universal key suitable for all doors

The Softline access door is a very versatile solution for dry and solid construction.
The metal door is equipped with a removable and revolving door leaf. The door can be closed with a square lock.

The steel components of the access door are galvanised and subsequently powder coated in RAL 9016, Traffic White. This provides the access door with double and very good corrosion protection. It is therefore also well suited for use in wet rooms. The mounting frames of smaller sizes are made from one piece while larger sizes and custom-made products are spot welded from four parts.

Custom-made products
up to 1,600 x 1,200 mm (in 10 mm steps). Reinforced version (Z-profile), smoke-proof with testing up to 800 x 1,000 mm.

Softline Iso access door

airtight, soundproof, square lock

white coated, for ceiling and wall installation

- Door leaf with fixed hinge
- Easy installation
- With wall anchor as standard for secure mounting

- Door leaf with insulation inlay
- Durable powder-coated surface

BENEFITS

Door leaf with recessed 7 mm square lock. Galvanised sheet steel, coated white (RAL 9016).

Tested for air permeability according to DIN EN 1026 and DIN EN 12207. Test results in the best classification level (window class 4).
Tested for airborne sound insulation in accordance with DIN EN ISO 10140-2. The measured sound insulation value is 31.8 dB.

The Softline Iso access door is equipped with a special insulation inlay in the door leaf. After closing the square lock, this inlay seals the access door airtight to the mounting frame. In addition, the insulation inlay contributes to better sound and heat insulation. The steel components of the access door are galvanised and subsequently powder coated in RAL 9016 (Traffic White). This provides the access door with double and very good corrosion protection. **Square socket key not included, see page 40.**

The door leaves have 2 locks from size 400 x 400 mm.
Test reports available upon request.

Softline Comfort access door

white coated

with concealed snap locks, for ceiling and wall installation

- Homogeneous appearance of the door leaf due to concealed snap locks
- Tool- and key-free opening
- Easy installation

- Detachable door leaf
- Durable powder-coated surface
- With wall anchor as standard for secure mounting

In comparison to the Softline access door, the Softline Comfort access door offers the additional convenience of tool- and key-free operation. The door is opened and closed by applying light pressure to the door leaf, while the snap locks concealed from the front open or close the access door. The steel components of the access door are galvanised and subsequently powder coated in RAL 9016, Traffic White. This provides the access door with double and very good corrosion protection. It can also be used in wet rooms.

Door leaf with concealed snap locks, after installation the closing direction cannot be changed.
Galvanised sheet steel, coated white (RAL 9016).

*(22-785-22-789) Sound insulation value tested according to DIN EN ISO 10140 / DIN EN ISO 717.
Classified sound insulation value $R_w = 27.5$ dB (size 600 x 600 mm).

Softline Comfort Iso access door

white coated, with additional insulation

with concealed snap locks, for ceiling and wall installation

- Detachable door leaf
- Easy installation
- airtight due to circumferential EPDM seal

- With wall anchor as standard for secure mounting
- Door leaf with insulation inlay
- Durable powder-coated surfaces

BENEFITS

The Softline Comfort ISO access door is suitable for installation in walls and ceilings in dry and solid construction. The closed door is sealed air- and dust-tight by a circumferential hollow chamber seal and is sound- and heat-insulated. The door leaf is equipped with an insulating thermal insulation material which contributes to the climatic isolation from the room side. Two concealed snap locks can be released for opening by lightly pressing against the door leaf and locked again for closing. The surface on the visible side is powder-coated in RAL 9016, Traffic White, in the standard version.

Sound insulation value tested according to DIN EN ISO 10140 / DIN EN ISO 717.
Classified sound insulation value $R_w = 27.6$ dB (size 600 x 600 mm).

Softline Pro access door

white coated, with square lock
for ceiling and wall installation

- Very stable design made of 1.5 mm sheet steel
- Easy installation
- Detachable door leaf, can be installed on the left or right
- Ceiling installation up to 800 x 800 mm

- Durable powder-coated surface
- With wall anchor as standard for secure mounting

The Softline Pro access door is distinguished by its rigidity and robustness. Due to high material usage and a welded construction, doors for wall installation up to a size of 1x2 m can be manufactured. The doors are fitted with square locks as standard. The steel components of the access door are galvanised and subsequently powder coated in RAL 9016 (Traffic White). This provides the access door with double and very good corrosion protection.

Square socket key not included, see page 40.

Also available with cylinder lock or prepared for profile cylinders.

Custom-made products

- Grid dimensions in 5 mm steps, from 1,800 in 100 mm steps
- Ceiling installation max. 800 x 800 mm
- Width x height
- Wall installation 1-leaf: min. 150 x 150 mm max. 1,200 x 2,000 mm
- Wall installation 2-leaf: min. 300 x 300 mm max. 2,000 x 1,200 mm

AluLight-C EI30 access panel

for installation in self rated fire protecting suspended ceilings

with gypsum plasterboard inlay, with concealed snap locks and self-adjusting safety catch arms

- No fire-protection set in the plenum
- Economical solution for suspended ceilings with fire protection only from the room side

- Quick and easy installation
- Self-adjusting safety catch arms on all sizes offer maximum safety

Tested in accordance with EN 1634-1. Fire load from the underside of the suspended ceiling.

Normalized sound level difference tested according to EN ISO 10140-2: 36 dB (dimension 400 x 400 mm).

The AluLight-C EI30 (a<b) access panel is specially designed for installation in independent fire protection suspended ceilings with one of the requirements being "fire load from room side only" and a fire resistance class of EI30. It provides reliable protection against fire spreading from the room to the suspended ceiling area for 30 minutes. The lightweight aluminium mounting frame is fitted with a fire protection strip. The inspection panel cover is filled with two inlays of fire protection boards DF (GKF) with a thickness of 12.5 mm. The cover is secured on both sides by self-adjusting safety catch arms. The catch arms guarantee that the panel lid is caught every time it is opened. The cover is easy to be removed and replaced.

Classification report is available upon request.

Alumatic-C EI30 access panel

for installation in self rated fire protecting suspended ceilings

with gypsum plasterboard inlay, with concealed snap locks and self-adjusting safety catch arms

Clear opening: A3 -32 mm x B3
Construction opening dimension:
A1 +5 mm / B1 +5 mm

- No fire-protection set in the plenum
- Economical solution for suspended ceilings with fire protection only from the room side

- Quick and easy installation
- With circumferential seal against smoke

BENEFITS

Tested in accordance with EN 1634-1. Fire load from the underside of the suspended ceiling.

Normalized sound level difference tested according to EN ISO 10140-2: 40 dB (dimension 400 x 400 mm).

Built-in plasterboard fire protection board 2 x 12.5 mm, with mounting kit.

Mounting frame and panel lid made of torsion-resistant extruded aluminium profile anodised quality, panel lid with circumferential rubber lip seal, mounting frame with intumescent strip.

The Alumatic-C EI30 (a < b) access panel is specially designed for installation in independent fire protection suspended ceilings with one of the requirements being "fire load from room side only" and a fire resistance class of EI30. It provides reliable protection against fire spreading from the room to the suspended ceiling area for at least 30 minutes. The aluminium mounting frame is fitted with a fire protection strip. The access panel lid is filled with two inlays of fire protection boards DF in 12.5 mm thickness and protected against smoke passage by a four-sided circumferential seal. The cover is secured on both sides by self-adjusting safety catch arms. The catch arms guarantee that the panel lid is caught every time it is opened. The cover is easy to be removed and replaced.

Classification report is available upon request.

Alumatic-C EI30 access panel

for installation in self rated fire protecting suspended ceilings

with gypsum plasterboard inlay, with concealed snap locks and self-adjusting safety catch arms

Clear opening: A3 -32 mm x B3
Construction opening dimension:
A1 + 5-10 mm x B1 + 5-10 mm

- No fire-protection set in the plenum
- Economical solution for suspended ceilings with fire protection only from the room side

- Quick and easy installation
- With circumferential seal against smoke

Tested in accordance with EN 1634-1. Fire exposure from below (room side).

Normalized sound level difference tested according to EN ISO 10140-2: 39 dB (dimension 400 x 400 mm).

The Alumatic-C access panel is specially designed for installation in independent fire protection suspended ceilings with a requirement "fire load from room side only". It provides reliable protection against the transfer of fire and smoke from the room to the suspended ceiling area for the classified period.

The aluminium mounting frame is fitted with a fire protection strip.

The access panel cover is filled with an inlay of fire protection board DF and protected against smoke passage by a four-sided circumferential seal. The cover is secured on both sides by self-adjusting safety catch arms. The catch arms guarantee that the panel lid is caught every time it is opened. The cover is easy to be removed and replaced.

Alumatic Sf 30 access panel

for installation in independent fire rated ceilings

with gypsum plasterboard inlay, with concealed snap locks and self-adjusting safety catch arms

- With all round smoke seal
- Tested for fire resistance (stability) according to the Belgian standard NBN 713-020 (issued 1968)

- Fast and easy installation
- Optionally lockable with concealed square socket lock

The RUG SEMIN "Alumatic Sf30" access panel is intended for installation in ceilings (12.5mm and 15mm thick). It has been tested for fire resistance (stability) according to the Belgian standard NBN 713-020 (issued 1968).

Sf = fire stability ("Stabilité au feu")

The access panel cover is protected against smoke protection by a seal on all four sides. The cover is secured on both sides by self-adjusting safety catch arms. The safety catch arms ensure the hatch cover is held each time the hatch is opened. The cover can be completely removed and re-inserted if necessary. The cover can be optionally made to be lockable by a square socket lock with cover cap. Available with optional RS square socket lock.

Alumatic EI30 access panel

for installation in self rated fire protecting suspended ceilings

with circumferential rubber lip seal and gypsum plasterboard inlay, with concealed snap locks and self-adjusting safety catch arms

- High quality rubber lip seal
- With concealed snap locks
- Self-adjusting safety catch arms on all sizes offer maximum safety

- Flush installation in gypsum plasterboard ceilings
- Detachable panel lid

BENEFITS

Tested according to DIN EN 1364-2 in conjunction with DIN EN 1363-1.
Fire exposure from below as well as from above (from the plenum).

Built-in gypsum plaster fire protection board 18 mm or 2 x 12.5 mm, 2-part fire protection set made of mineral fibre, removable panel lid, with installation kit.
Mounting frame (with intumescent strip) and panel lid (with circumferential rubber lip seal) made of torsion-resistant extruded aluminium profile. Access panel for self-supporting fire protection suspended ceiling EI30 (18 mm) available as a custom-built product, tested in dimensions up to 450 x 1,500 mm.

Classification report is available upon request.

Alumatic EI30 access panel

smoke, air and dust tight for installation in self rated fire protecting suspended ceilings
with circumferential EPDM hollow chamber seal and plasterboard inlay, with concealed snap locks and safety catch arms

- Additionally prevents the escape of cold smoke and thus protects against poisoning
- Ideal for rooms in which the supply and exhaust air is routed via the ceiling cavity

- Used especially in clean rooms and operating theatres where special air management (over/ underpressure) is required

Tested for fire protection class EI30 according to DIN EN 1364-2 in conjunction with DIN EN 1363-1. Tested for smoke tightness according to DIN EN 1634-3. Tested for air permeability according to DIN EN 1026 and DIN EN 12207. Test results in the best classification level (window class 4).

Built-in gypsum plaster fire protection board DF, 2 x 12.5 mm, 2-part fire protection set made of DF, removable panel lid. Mounting frame and panel lid made of torsion-resistant anodised quality extruded aluminium profile, fire protection set made of gypsum plaster fire protection boards.

Classification report is available upon request.

SEM-LIGHT

Lightweight interior filling and smoothing compound

ULTRA LIGHT FILLER

Ready to use and lightweight, SEM-LIGHT makes filling and smoothing work easy.

With no shrinkage in one coat and fast drying, it allows quicker covering and therefore saves time on site.

www.semin-plaster.com

ADVANTAGES

- Very light paste
- Fast drying
- Non-shrink filling and smoothing in one coat

SEMIN SAS

1A rue de la gare
57920 KEDANGE SUR CANNER
FRANKREICH.

ibis Stadt-Hotel

Bremen - Remberstring

The ibis Stadt-Hotel in Bremen with its air-conditioned 162 rooms and conference rooms is centrally located between the railway station and the historic city centre. It therefore represents the ideal starting point for all activities in and around Bremen.

Due to the high demands placed on the building, all corridors were equipped with materials with fire resistance class EI90.

Here our **ceiling panels EI90 (2 x 20 mm)** make sure that hotel guests and staff are safe.

Executing company:
Runge Creative Object Design

Alumatic EI90 40 mm access panel

for installation in self rated fire protecting suspended ceilings

with circumferential rubber lip seal and gypsum plasterboard inlay, with concealed snap locks and safety catch arms

- High quality rubber lip seal
- With concealed snap locks
- Catch arms in all sizes offer maximum safety

- Flush installation in gypsum plasterboard ceilings
- Detachable panel lid

BENEFITS

Tested in accordance with DIN EN 1364-2. Fire exposure from below as well as from above (from the plenum).

Tested according to EN 1364-2 Alumatic EI 90 2 x 20 mm - Suspended ceiling EI 90 (a -> b) only from above

Tested according to EN 1364-2 Alumatic EI 90 2 x 20 mm - Freely suspended ceiling EI 90 (a <- b) only from below

Built-in gypsum plaster fire protection board DF/GKF 40 mm, 2-part fire protection set made of mineral fibre, removable panel lid, with mounting kit.

Mounting frame (with intumescent strip) and panel lid (with circumferential rubber lip seal) made of torsion-resistant extruded aluminium profile anodised quality.

Suspended ceiling alone tested from below as well as from above

SecuTecna EI120 50 mm access panel

for installation in self rated fire protecting suspended ceilings
with square lock and safety wire

- Sturdy steel construction, zinc-plated
- Fire protection set, two-part, in lightweight mineral fibre material
- Detachable flap lid with catch mechanism

Tested according to EN 1634-1. Fire exposure from below in plasterboard ceilings with fibre-reinforced plasterboards according to EN 15283-1. Normalized sound level difference tested according to EN ISO 10140-2: 34 dB (dimension 400 x 400 mm).

The SecuTecna access door from RUG SEMIN is intended for installation in fire protection suspended ceilings of 50mm thickness. The access door consists of a steel frame and a flap lid in steel with 2x25mm fleece-reinforced fire protection boards. The flap lid is equipped with a square lock for secure closing. For inspection work, the flap lid can either be opened and be left suspended in the frame or also be completely removed. On opening, a catch mechanism provides protection against the dropping down of the lid. The lightweight mineral fibre fire protection set is arranged in the intermediate ceiling area in accordance with the instructions and is easy to handle due to the low weight.

Access panel for fire protection suspended ceilings EI120, available as special design, tested in dimensions up to 800 x 800 mm. Classification report is available upon request.

AluSpeed® Safe EI30, EI90 access door

smoke-tight, for one side cladding shaft walls and solid walls
with circumferential EPDM hollow chamber seal and gypsum plasterboard inlay

- Easy wall installation through detachable door leaf
- Patented mounting claws allow easy and quick installation by only one fitter
- Screw head-free surface
- Lockable with square lock

Tested according to DIN EN 1364-1 and DIN EN 1363-1 as well as for EI30 according to EN 1634-1.
Smoke-tight according to DIN EN 14600 and DIN EN 13501-2.

Tested for airborne sound insulation in accordance with DIN EN ISO 10140-2. The measured sound insulation value for EI30 is 38.1 dB and for EI90 40.1 dB. Frame construction made of steel and DF strips.

Door leaf made of DF in steel frame with intumescent strip.

A matching key is included in the scope of delivery: Part No. 22-216 (see page 40-41)

and installation instructions are included.

Optional accessories: **Installation kit for solid walls (part no. 22-997)**

Classification report is available upon request. Fire rated by CSTB.

FireProtect-SW 60 access door

With square lock for installation in one side cladding shaft walls and solid walls

- Variably installable irrespective of wall thickness
- Door panel removable for wall mounting
- The screw head-free surface saves filling work

- With an all-round seal, smoke-tight and sound insulation tested

Fire tested from the shaft and room sides in accordance with NF EN 1634-1. Tested for airborne sound insulation EN ISO 10140-2. Standard-sound level difference: 48 dB (size 400 x 400 mm).

The FireProtect-SW 60 access door is especially suited for applications in shaft wall systems, installation shafts and facing formwork in drywall constructions. The mounting frame and the door panel are in galvanized sheet steel and are reinforced on the back with fire protection panels. In the frame there is an all-round hollow section seal. Thus, the door is smoke-tight.

The door panel, removable for installation, and the pre-machined counterbores in the mounting frame simplify the wall mounting. The door panel is firmly fitted after installation. The screw head-free door panel surface saves time-consuming filling work.

Fire resistance class EI 60 (i <--> o) Plasterboard inlay DF according to DIN EN 520 - mineral wool in accordance with EN14303, 2 x 15 mm

AluRapid® EI30, EI90 access panel

for installation in one side cladding shaft walls and solid walls

- 1 panel, 5 visible surface variants
- Self-locking firewall with handle for easy operation
- Patented mounting claws allow easy and quick installation by only one fitter
- Can be mounted directly from the room side

- Low installation depth
- Can be retrofitted

Tested in accordance with DIN EN 1364-1 and according DIN EN 1634-1.

Construction with extruded aluminium profile anodised quality. Fire bulkhead made of DF panels with intumescent material and height-adjustable magnetic holders for front panel.

Universal faceplate made of galvanised sheet steel.
Classification report is available upon request.

Fire rated by CSTB.

Multiple finishing solutions:

- galvanized as standard
- white coated
- stainless steel
- tray for tiles
- tray for gypsum board

Alumatic-W EI30 access panel

for installation in shaft wall systems / installation shaft walls / facing shells
with gypsum plasterboard inlay, with concealed snap locks and self-adjusting safety catch arms

Clear opening: (A3 -32 mm) x B3
Construction opening dimension =
Installation dimension (A1 +5-10 mm) x (+5-10 mm)

- Cost-effective solution for shaft walls with fire protection
- Circumferential lip seal (silicone) against smoke passage

- Quick and easy installation

Tested according to EN 1634-1 Inspection panel for use in shaft wall systems / installation shaft walls / facing panels.
Normalized sound level difference tested according to EN ISO 10140-2: 40 dB (dimension 400 x 400 mm)

Installation in shaft walls with one of the requirements being "fire load from shaft side and room side". Reliable protection against spreading of fire from the room into the shaft or vice versa. Mounting frame made of aluminium with fire protection strips, panel with inserts made of fire protection plates DF. Self-adjusting safety catch arms on both sides, removable cover.

Assembly instruction: For wall installation, the locks must be positioned upwards.
Classification report is available upon request.

Softline Protect EI30, EI60 access door

Fire resistance class EI30 - EI₂60 for installation in shaft wall systems / installation shaft walls / facing panels

Clear opening: A3 -15 mm (from size 50x50) x B3
Construction opening dimension:
A1 +5 mm / B1 + 5 mm

- Door leaf not detachable
- Left- or right- sided hinge
- Easy installation

- Durable powder-coated surfaces
- With wall anchor as standard for secure mounting
- Door leaf with fire protection inlay

BENEFITS

Tested according to EN 1634-1 Inspection panel for use in shaft wall systems / installation shaft walls / facing panels.
Tested for airborne sound insulation according to DIN EN ISO 10140-2 and DIN EN ISO 717-1, sound reduction index R_w 22.7 dB.

The Softline Protect access door is specially designed for installation in shaft walls with a minimum thickness of 25 mm and the requirement of fire resistance class EI 30 or EI2 60. It provides reliable protection against fire spreading from the room into the shaft or vice versa.

The powder-coated metal surface of the installation frame covers the wall opening and provides an overall harmonious appearance. Lockability with square lock prevents any opening by unauthorised persons.

Door leaf with recessed 7 mm square lock. Galvanised sheet steel, coated white (RAL 9016).

The door leaf is equipped with a fire protection inlay made of 15 mm DF/GKF gypsum plasterboard inlay and a 40 mm mineral fibre board as well as a circumferential insulation layer former.

Size 400 x 400 mm door leaf with 2 locks.

Fire rated by CSTB.

Alumatic partition wall EI30, EI90

Access panel

for installation in non-load-bearing, space-enclosing installation walls, metal stud walls, lightweight partition walls and installation walls with wall cladding on both sides

- With concealed snap locks
- Self-adjusting safety catch arms on all sizes offer maximum safety

Tested according to DIN EN 1364-1 and DIN EN 1363-1.

Mounting frame and panel lid made of torsion-resistant extruded aluminium profile anodised quality, panel lid with circumferential rubber lip seal, mounting frame with intumescent strip.

Classification report is available upon request.

Assembly instruction: The locks are to be positioned upwards.
